BULLETIN #5_2016

RE: AMENDMENT TO MINI SEVEN WHEEL REGULATIONS

To all M7RC Members and Associates,

Following the introduction of a new Mini Se7en wheel option for 2016, the Committee of the M7RC wishes to point out the following important information:

The new Mini Spares-supplied Mini Se7en wheel, approved and subject to testing, has a slightly different part number to that published in the 2016 M7RC Regulations.

The correct part number is: C-21A1901A – note the added 'A' suffix on the end.

It is the one marked for use with drum brakes, ignore the description, it has the correct offsets. This wheel has a near-identical offset (ET value) to the 100+ version (STR 1082), and is also a direct replacement of the Minilite wheel sold as MA1050D.

Nb. Should a registered competitor have already purchased C-21A1901 in error, Mini Spares also agrees to replace it with C-21A1901A at no extra cost to the competitor.

The amended wording (**in red**) is as follows:

TR.5.12.2.1 Mini Se7en S-Class and Mini Se7en only;
Only wheels STR1082 (100+), MA1050D (Minilite), and **C-21A1901A** (MS), with the correct wheel nuts are permitted.
Note: check wheel nut penetrates the wheel a minimum of 10mm. If necessary machine the hexagonal flange.
